Profile. Final-year **Web & Software Engineering** student at **ESPRIT** building production-style **full-stack** and **microservices** applications. Strong hands-on experience with **Spring Boot**, **Angular**, **React**, **NestJS**, **PostgreSQL**, **MongoDB**, **Docker**, **REST APIs**, **cloud-ready** deployments, and **AI**-integrated features (OpenAI APIs, JWT auth, automated workflows).

TECHNICAL SKILLS

Languages	Java, TypeScript, JavaScript, PHP, SQL
Frameworks	Spring Boot, Spring Cloud, Angular, React, Next.js, NestJS, Node.js, Symfony
Databases	PostgreSQL, MongoDB, MySQL, Oracle, SQLite
Architecture	Microservices, REST APIs, Distributed Systems, Event-Driven Design, JWT, OpenAPI/Swagger
Cloud & DevOps	Docker, Git, Linux, CI/CD, containerized deployments
AI & Data	OpenAI APIs, prompt engineering, ML fundamentals, Power BI, Tableau, Python (data/ETL)
Tools	Jira, Postman, Figma, Hadoop
Methods	Agile/Scrum, UML, technical documentation, API design

EXPERIENCE

- **Software Engineering Intern (Final Project) – BI & Data Platform** Mobelite, Tunis — Mar 2024 – Sep 2024
 - Built interactive **Power BI** dashboards to track KPIs and support operational decision-making for internal stakeholders.
 - Designed **ETL** pipelines and **SQL Server** data models; automated recurring reports and reduced manual reporting effort.
 - Integrated multi-source datasets via **REST APIs**; managed delivery workflow and sprint tasks in **Jira**.*Stack: Power BI, SQL Server, Python, Tableau, REST APIs, Jira*

SELECTED PROJECTS

- **ByteBattle – AI Competitive Coding Platform**
 - Developed a full-stack challenge platform with challenge lifecycle, automated submission evaluation, leaderboards, and AI-assisted features.
 - Implemented **JWT** auth, RBAC, and **OpenAI API** integration via a modular **NestJS** service layer.
 - Containerized services with **Docker** for reproducible local and deployment-ready environments.*React, NestJS, MongoDB, Docker, REST APIs, JWT, OpenAI APIs*
- **Microservices E-Commerce System**
 - Designed a **microservices** architecture with domain-separated services, independent databases, and inter-service communication via **REST APIs**.
 - Applied **Spring Boot/Spring Cloud** patterns for service decomposition, API gateways, and scalable backend modules.
 - Dockerized the full stack to support portable deployment and environment parity across dev/test.*Spring Boot, Spring Cloud, PostgreSQL, Docker, REST APIs, Microservices*
- **Event Management Platform (Scalable Web App)**
 - Built registration, booking, and admin workflows with a decoupled **Angular** frontend and **Spring Boot** backend.
 - Modeled relational data in **PostgreSQL**; secured APIs with **JWT** and documented endpoints for integration testing.*Spring Boot, Angular, PostgreSQL, JWT, Docker, REST APIs*
- **ElFirma – Collaborative Agriculture Platform**
 - Contributed to web and desktop modules (marketplace, land management, claims, payments) with shared business services over **REST APIs**.*Symfony, JavaFX, MySQL, REST APIs*

EDUCATION

2024 – Present	Engineering Degree, Computer Science (Web & Software Engineering) — ESPRIT, Tunis
2021 – 2024	B.S. Software Engineering & Information Systems — École Polytechnique Internationale Privée de Tunis
2017	Baccalaureate, Computer Science — Lycée Abu El-Kacem Chekki, La Marsa

LANGUAGES

English — Professional (technical docs, presentations)
French — Professional (reports, client communication)
Arabic — Native

INTERESTS

Distributed systems & cloud-native engineering, generative AI tooling, football, motorsport
